

Calecim Hair Restoration

Calcium Hair Restoration Serum is a product which has been clinically proven to optimise hair follicle function, stimulate hair growth, boost hair density and reduce shedding. Amongst its active ingredients is PTT-6 which has been demonstrated to reduce the inflammation that may lead to hair loss.

During the treatment

Anaesthetic cream is applied to the area of the scalp where hair is thinning for 30- 45 minutes to allow comfortable microneedling. A rapid microneedling dermapen device is used to puncture the anaesthetised skin hundreds of times, increasing the blood flow to the treated area and then Calecim Advanced Hair Serum is applied. You will then be given some serum to apply at home.

Treatment frequency

Treatments are administered once weekly for 6 weeks.

When to expect to see results

It takes 3 months for new hair growth to become apparent.

Possible unwanted effects

Allergy
Infection

Contra-indications

Skin sores, rash, pimples, hives, cysts or infection
Known allergy or sensitivity to any of the ingredients
Pregnancy and breastfeeding
Calecim Hair Restoration Serum is derived from ethically sourced New Zealand red deer umbilical cord therefore it may be unsuitable for vegans.

Underlying causes of hair thinning

Hair thinning or loss can be caused by many factors, genetic, environmental and related to underlying conditions. It is recommended that you consult your doctor or a dermatologist for advice as to whether further investigation is required for your hair thinning.
